

Peak memory — every run at every thread count plotted

set_E_100 — n = 100 genomes, 0.478 Gbp

set_E_full — n = 1,000 genomes, 4.807 Gbp

Horizontal bar = median across all thread counts and repeats. ``/usr/bin/time -v`` Maximum resident set size.

DeepCheck's figure excludes the CheckM2 run it requires to produce its input; on the full set only MAGICC and DeepCheck were run at all four thread counts.
